

Promptathon

Scenario 1 — Search Functionality

✗ Weak: "Test the search feature."

What's missing: No product type (e-commerce, hospital),
no filter/sort behavior, no empty/invalid input scenarios, no performance angle.

Instruction:

Need to get the 20 test cases to test the search feature in the ecommerce project which covers all positive , negative scenarios

Context:

It is the e-commerce application similar to amazon, This the first landing page feature which allows user to search the product they want to buy.

Example:

Testcase Id| Description| TestSteps |Input |Precondition| Expected output|

001 | search with relevant product |1. Enter the product name "phone" in the search bar|
Phone| user user be landed in the home page of the application|It should display the product
related with the phone|

Persona:

Act as an senior TestEngineer

OutputFormat:

Need to get the output in the Table format

Tone:

Technical

Scenario 2 — File Upload

✗ Weak: "Generate test cases for file upload."

What's missing: No file types, no size limits,
no success/failure criteria, no security angle (malicious file upload).

Instruction:

Need to get the test cases to test the File Upload feature in the ecommerce project which covers all positive and negative scenarios.

Context:

It is the e-commerce application similar to Amazon. On the product listing page, sellers can upload files (images, documents) to showcase their products. The feature allows uploading product images and related documents.

Constraints:

- Supported file types: JPG, PNG, PDF
- Maximum file size: 5 MB
- Minimum file size: 1 KB
- Multiple file uploads allowed (up to 5 files)
- Security: System must reject malicious files (e.g., scripts, executables)
- User must be logged in as a seller to access upload functionality

Example:

Testcase Id | Description | TestSteps | Input | Precondition | Expected Output

001 | Upload valid JPG image | 1. Click upload button 2. Select "product.jpg" (3 MB) 3. Click submit | product.jpg | Seller logged in | File uploaded successfully and preview displayed

Persona:

Act as an TestLead[Strict]

OutputFormat:

Need to get the output in the downloadable excel format

Tone:

Technical

Scenario 5 — API Testing

✗ Weak: "Write API test cases for user registration."

What's missing: No HTTP method, no request/response structure,

no status codes to validate, no tool context (Postman/RestAssured).

Instruction:

Need to get the test cases to test the User Registration API which covers all positive and negative scenarios.

Context:

It is the e-commerce application similar to Amazon. The User Registration API allows new users to create accounts.

Details:

- Endpoint: POST /api/v1/register

- Request Body (JSON):

```
{  
  "username": "string",  
  "email": "string",  
  "password": "string",  
  "confirmPassword": "string"  
}
```

- Success Criteria:

- Valid input returns 201 Created with userId in response

- Failure Criteria:

- Invalid input returns 400 Bad Request with error message

- Duplicate email returns 409 Conflict

- Missing fields return 422 Unprocessable Entity

- Security:

- Password must be hashed, not stored in plain text

- SQL injection or script injection attempts must be rejected

- Tools: Postman / RestAssured

Example:

Testcase Id | Description | TestSteps | Input | Precondition | Expected Output

01	Register with valid details	1. Send POST request to /api/v1/register with valid JSON body			
		{"username":"testuser","email":"test@example.com","password":"Pass@123","confirmPassword":"Pass@123"}	API server running	Response 201 Created with userId returned	

Persona:

Act as an senior QA Engineer[Strict]

OutputFormat:

Need to get the output in the downloadable excel format

Tone:

Technical
